

CHOICE OF THE PARCEL

A study of the ground before plantation is necessary:

- Analyze ground and cultivation profile, will guide you in this choice and will allow you to bring a fertilization and a suitable preparation of the ground.
- The ground will have to be deep, draining, not limestone.
- To avoid the frost susceptible situations.

CHOICE OF THE VARIETY

HYBRID VARIETIES (*Castanea sativa* X *Castanea crenata*)

MARIGOULE CA15

Tree which shape is semi-erect, ramified, very vigorous. Seedlings resulting from layered seedlings have a good tolerance with Ink. It is planted with the density of more or less 90 seedlings hectare, or 8 m X 8 m with removal of a row on two in diagonal enters the 10th and 12th year for a density of 80 trees/ha

The fruit has a long elliptic form, of red colour brown shining, large gauge very little partitioned, with early semi maturity (of the 1/10 to the 10/10).

BOUCHE DE BETIZAC CA125

Tree which shape is erect, very strong and which setting of fruit is quick. It is planted with density of more or less 125 seedlings hectare. The seedlings resulting from layering are tolerant with Ink and not very sensitive to the Endothia.

The fruit is of short elliptic form, of colour light chestnut, of large size, little bulk-headed. It is collected early in season (of the 20/09 to the 1/10), is peeled well and had very good gustatory qualities.
