

## VARIETAL CHOICE

### **VARIETY FRANQUETTE :**

Great adaptability, variety with late bud break.  
Characterized by an erect shape and a good productivity.  
Its nut is of oblong shape and has a very good quality as a fresh walnut.

*INTENSIVE ORCHARD* -7mx7m to **8mx8m**

A perfect control of the cultivation conditions: irrigation, treatment, fertilization, prune, maintenance of the ground will be essential for a good success.  
Output at 10 years: 3200 kg/ha.

*HALF-INTENSIVE ORCHARD* - 10 m x 10 m

The full productivity of this orchard will be differed from approximately 3 years in comparison with an intensive orchard.  
Output at 10 years: 1700 kg/ha

### **PIERAL LARA ® VARIETY :**

Not very vigorous variety, with side fructification, which shape is semi-erect, bud breaking 8 days before Franquette.  
Its productivity is high and its setting of fruit is quick. Its round nut has a large size.  
Output at 8 years: 6.000 kg/ha

### **FERNOR VARIETY** (obtention INRA) :

Variety moderately strong, with side fructification, with semi-erect shape. Its bud break happens 3 days after Franquette, has a high productivity, a quick setting of fruit and is not very sensitive to the Bacteriosis. Its slightly lengthened nut, of good size, has one very good quality of green walnut. Example of output: 3205 kg/ha at 8 years (Station Nucicole Rhône-Alpes).

### **THE FRUIT-BEARING HEDGE** - 8X4 à 6X8

This new technique is recommended for the varieties with side fructification.  
A density of plantation from 300 to 400 seedlings hectare, in axis shape, annually pruned.  
This technique aims to obtain quickly a very high production.
